

1. Overview

EP-AP6113 gas detector Pian weak current front discharge, the use of double electromagnetic shielding and very low noise multi-level noise reduction power meter, to achieve 200fA weak current resolution, suitable for thickness gauge ionization chamber detectors and other gas detectors signal readout occasions.

2. Functional indicators

- 1 Specifically adapted to amplify the weak current of gas detectors
- 2 Extremely low noise
- 3 Input isolation island protection
- 4 The power supply conforms to NIM chassis standards

3. Performance parameter

- Dimensions 33Φ×18H mm after adding SMA connector
- Power supply ±12V Dual power input
- Output Signal Dynamic Range ±10V MAX
- Output signal polarity opposite to the input signal
- Signal Gain 200mV/MeV
- Rising time <60ns
- Signal output Exponential pulse signal
- Input stage Built-in field effect tube

4. Electromechanical interface

- INPUT Detector Connection Port
- HV High voltage input port (SHV)
- POWER DC power input port (DB9/NIM standard)
- OUT Voltage output signal

5. Performance testing

● Figure 1 Device for measuring ^{137}Cs radioactive sources in gas ionization chambers

● Figure 2 Preamplifier output signal
